PROJECTS

1.Real-Time URL & Profile Safety Checker

Technologies Used:

- **Frontend:**HTML, CSS, JavaScript
- **Backend:**Node.js, Express
- **API:**VirusTotal for URL threat analysis

- A full-stack cybersecurity tool developed to detect malicious URLs and fake social media profiles in real-time. Integrated VirusTotal API for threat analysis and built an interactive frontend with dynamic feedback and history tracking. Demonstrates practical skills in web security and full-stack development.

2. Step Lock System in Buses (IoT):

- **Technologies Used:** C++ (Arduino-based project)
- Engine shuts down automatically if a passenger travels on the footboard, preventing accidents.Used sensor-triggered logic and relay integration to control the engine circuit.

3.Language Learning App (Flutter)

Technologies Used: Flutter, Dart

- Built a mobile app with flashcards and quizzes to support language learning.Implemented UI widgets, routing, and responsive layouts.
